The high power **Blackline F15⁺** is a high performance, wide-bandwidth system in a compact and efficient package. Extended frequency response is provided by a new 15" (380mm) LF driver and a new 1.4" (35mm) exit compression driver mounted on a rotatable 80° x 50° constant directivity HF horn. The new LF driver features a tough, water resistant cone and a lightweight, high BL, neodymium motor system with inside/outside coil windings for improved heat transfer. An aluminium demodulating ring reduces distortion and improves midrange clarity at high levels and increased excursion is available via a triple roll surround and deep motor structure. The new HF driver utilises a titanium diaphragm with controlled break-up modes for improved sonic performance at high frequencies and the crossover design and LF cone profile have been optimised to match the directivity of the HF horn and LF section through the crossover region.

The F15⁺ is perfect for higher power applications where ease of installation, or speed of deployment, are important factors. Its ergonomic design and rotatable HF horn makes near-ceiling mounting and aiming easy in venues with restricted height, whilst its multi-angle birch ply cabinet allows it also to be used as a high power floor monitor. Its twelve M8 inserts make a variety of horizontal or vertical mounting methods possible.

The F15⁺ comes with a top hat fitting for speaker stand mounting. This fitting can also be used as a pole socket when the F15⁺ is used with, for instance, a Blackline S18⁺ subwoofer.

A Martin Audio M3⁺ or DX1.5 Electronic Controller is available to provide F15⁺/subwoofer crossover and limiter facilities.
